

# Type E7 & E8 Vacuum Circuit Breaker Retrofit

Replacement for English Electric E7 & E8 Type Air Breakers

P&B started developing vacuum retrofit circuit breakers in 1991. Since then, we have become a market leader by designing, type testing and introducing many medium voltage vacuum breaker designs to replace air and oil break circuit breakers manufactured by a range of UK suppliers.

In many cases ageing switchgear can be given a life extension of up to 30 years by simply replacing the circuit breaker, as the switchgear fixed portion is usually almost as good as new.

## Benefits of Retrofit Switchgear:

- » Increased operating reliability and safety
- » Enhanced short circuit ratings available
- » Reduced maintenance and environmental impact
- » Elimination of hazardous materials such as asbestos
- » Service life can be extended by up to 30 years

## Benefits over replacing complete switchboards include:

- » Significant overall cost savings
- » Minimal disruption to site and supplies
- » No need to disturb or replace HV cables

Our E7 & E8 circuit breaker range has been designed for total reliability. It utilises the ABB VD4 vacuum circuit breaker which has a proven global track record designed to achieve trouble free performance over many thousands of maintenance free operations.

Our offering utilises many parts from the original truck including the original frame moulding and interlock mechanism ensuring a perfect fit into your existing cubicle with no alterations to the existing cubicle. All current carrying parts are fully refurbished & re-plated and all cluster rings are replaced with our improved type tested design. The unit is completely re-wired to your specific requirements. We have some units in stock so don't hesitate to call and discuss your requirements. We also offer full cubicle refurbishment including CT and protection upgrade specific to your requirements either on site or factory finished units. A full installation and commissioning service is always available.

## RATINGS AVAILABLE

Maximum System Voltage	kV	11
Rated Power Frequency Withstand	kV	28
Basic Impulse Level	kVp	75
Normal Rated Current	A	1600, 2000, 2500 & 3000
Short Circuit Breaking Current	kA	up 53 rms (1000MVA)
Short-Time Current	kA 3secs	53
Peak Making Current	kAp	137
Mechanical Endurance Performance		> 10,000 Operations
